

CONTROL SYSTEM

SMART CONTROL TECHNOLOGY FOR OPTIMALLY TUNED PROCESS WORKFLOWS, EASY, USER-FRIENDLY OPERATION AND ENERGY EFFICIENT.

TECHNICAL DESCRIPTION

The concept of "Industry 4.0" continues to advance the interlinking of machines and systems. This means that the significance of control, regulation and automation technology is becoming huge. Smart, modern control systems ensure optimum process workflows and energy efficient operation. This is why system control is at the heart of every system.

In order to meet not only the requirements and preferences of customers in the future, but also to improve techniques and processes with them, MONTA has founded its own electronics department. Our competent programmers and software engineers are constantly developing MONTA's system controls. High quality software and hardware systems, components and modules such as SPS Siemens S7-1500, modern bus systems (Profinet), large control panels, Safety SPS, etc. are a given with MONTA. In addition, MONTA systems also come with remote maintenance modules as standard in order to reduce the reaction time for any potential problems to a minimum.
