

SEMI-AUTOMATED SYSTEM

MANUAL LOADING AND UNLOADING WITH AUTOMATIC PENETRANT APPLICATION.

TECHNICAL DESCRIPTION

The semi-automated crack testing system contains a manual feed system via which your parts are fed into the crack testing system. Here, the penetrant is automatically applied to the parts, which are then transported to the darkroom. An employee then checks your products for cracks under UV lights and documents any anomalies.

With a MONTA crack testing system, you get a technically high-quality and user-friendly system which reliably tests your products and guarantees you optimum quality.
