

PAINTING WITH CROSS-CONVEYING SYSTEMS

SYSTEMS WITH CROSS-CONVEYING TECHNOLOGY FOR OPTIMUM USE OF SPACE AND FLEXIBILITY, FOR LARGE PARTS.

TECHNICAL DESCRIPTION

Cross-conveying is a very good alternative for companies with a high level of vertical manufacturing within the coating process. Here you can, for example, combine the pretreatment, coating and drying processes in one compact installation. This system, which is particularly suitable for large, heavy parts, offers a very good price-performance ratio compared to other conveyor systems.

MONTA is able to provide you with technology for all coating processes from one place. Here you will save time and money with our technical expertise and or experience in coordinating various systems.
